1 Assignment report

1.1 Reflection of data analysis and Python in general

In today's digital age, businesses are increasingly dependent on data collected from a variety of sources. The collection of data and subsequent analysis is very important for businesses as it provides information to make objective decisions on how to make business operations more efficient and effective, enhance customer experiences and provide a competitive advantage. Data analytics is the methodology employed to collect, clean, merge, transform and explore data. The insights derived from this process can be communicated to businesses to assist them in making decisions that align with their business goals.

Python is an open-sourced programming language that can be used to provide the necessary code to perform data analytics. As an object-oriented language, the code focuses on the type of data being worked with and its interaction, resulting in an easy language to learn due to its simplicity. The Anaconda, Jupyter Notebook provides an interactive Python environment that allows for testing and debugging. Python has extensive libraries of code, that allows users to leverage and use pre-programmed functions eliminating the need to write the code from scratch. Two such libraries that are used extensively in the industry include Numpy and Pandas. Numpy provides a variety of mathematical functions that can perform on entire array of data without the need for loops. Some of the applications of Numpy include data cleaning (e.g., fill missing data) and providing statistical analysis. However, Numpy falls short when it comes to handling structured data tables. This is where Pandas comes in. An extension of Numpy, Pandas enables data analysts to load their data from a file (e.g., csv) and in turn preview, manipulate, transform and visualise that data. For data analysis involving data stored in files, both Numpy and Pandas are typically imported into Python.

1.2 Data processing pipeline justification to cleanse and transform the movie data in Jupyter notebook

Please refer to the Jupyter notebook (Assignment1 DPetroulias) for additional information.

Explore the data to gain an understanding

Review of data structure and identify all the variables and correct any issues

There are 15069 rows and 6 columns in the streaming_details dataframe (df) (20220620_movie2ds.csv). No variable required conversion.

There are 15069 rows and 10 columns in the movie_details df (20220525_movieds.csv). The variables that are of most interest to this analysis is the title of the movie, viewing age, the rating scales IMDb and Rotten tomatoes, Genres and the available language.

Please refer to the Jupyter notebook (Assignment1 DPetroulias) for a summary of the variables.

Assess the quality of the data and rectifying any issues

streaming_details dataframe

There were no missing values, duplicates, incorrect values and outliers in the streaming_details df.

Movie_details df

All columns in the movie_details dataframe, except Titles and Year, had missing values, as shown below.

```
#check for missing values for both datasets
movie_details.isnull().sum()

Title          0
Year           0
Age           8460
IMDb           526
Rotten Tomatoes 10433
Directors       673
Genres         255
Country        397
Language       562
Runtime        536
dtype: int64
```

The Rotten Tomatoes rating has many missing values (approximately 2/3 of the data), compared to the IMDb. IMDb is well established and reliable rating scale with a distribution that is closer to normal than Rotten Tomatoes¹. Therefore, only IMDb was used in the analysis. Missing IMDb data was replaced with Rotten Tomatoes values but only two values were replaced. No outliers were found in the IMDb rating scale.

The variables of interest are Age and Genres. The 'Age' variable has 5 unique variables (All, 18+, 16+, 13+, 7+) confirming it is categorical. There were over 8,000 missing 'Age' values, that are too many to delete. For this analysis, the missing 'Age' values were replaced with 18+ to avoid inappropriate movies for younger age groups.

For the 'Genre' variable, many movies have multiple genres. For this analysis, the first genre listed was identified as the primary genre. A new column, Primary_Genre, was created with this value. There are now 27 unique genres in the Primary_Genre as shown in the output below:

```
27
['Documentary' 'Reality-TV' 'Action' 'Horror' 'Drama' 'Comedy' 'Thriller'
 'Animation' 'News' 'Fantasy' 'Sci-Fi' 'Adventure' 'Romance' 'Western'
 'Biography' 'Crime' None 'Mystery' 'War' 'Family' 'Music' 'Short'
 'Musical' 'Film-Noir' 'History' 'Talk-Show' 'Sport' 'Game-Show']
```

Some genres in the above list, like Reality-TV and Talk-Show, are not movies. Before removing these genres, the movie dataframe was filtered to include only French-language movies, which may eliminate these genres.

Filter and merge the datasets

Filter to include only French-language movies

Before merging with the streaming dataset, the movie dataset was filtered to include only French-language movies. This reduced the number of missing values significantly. Out of 15,069 entries, 717

¹<https://www.freecodecamp.org/news/whose-reviews-should-you-trust-imdb-rotten-tomatoes-metacritic-or-fandango-7d1010c6cf19/>

French-language movies were identified with no missing values for Genres, Country, and Language. Only 12 IMDb scores were empty, so these movies were deleted, resulting in a dataset with 705 rows and 15 columns. The dataset is now called `movie_details_french_clean`.

Merge datasets

The datasets `movie_details_french_clean` and `streaming_details` were merged using an inner join, ensuring all movies in `movie_details_french_clean` are kept. The merged dataframe, `merged_movies_french`, includes 705 rows and 15 columns. It was confirmed that there are 18 genres in the filtered and merged dataframe, all of which are 'movie' type genres as follows:

```
#Confirm number of and type of unique values for Primary_Genre with the merged and clean dataset
print(merged_movies_french.Primary_Genre.nunique())
print(merged_movies_french.Primary_Genre.unique())

18
['Action' 'Horror' 'Drama' 'Comedy' 'Crime' 'Animation' 'Thriller'
 'Sci-Fi' 'Adventure' 'Music' 'Documentary' 'Family' 'Biography' 'Romance'
 'Short' 'Fantasy' 'Mystery' 'Western']
```

1.3 Conclusion

From the cleaned movie dataset provided there are 705 French movies with 18 primary genres as follows:

```
18
['Action' 'Horror' 'Drama' 'Comedy' 'Crime' 'Animation' 'Thriller'
 'Sci-Fi' 'Adventure' 'Music' 'Documentary' 'Family' 'Biography' 'Romance'
 'Short' 'Fantasy' 'Mystery' 'Western']
```

The top 20 movies from each genre were selected and the output provided in Appendix 1. For the primary genres - *Action, Adventure, Animation, Biography, Comedy, Crime, Documentary and Drama*, a list of top 20 movies was obtained which had IMDb scores at least greater than 6 that catered to a variety of ages. However, for the primary genres - *Family, Fantasy, Horror, Music, Mystery, Romance, Sci-Fi, Short, Thriller and Western* - there were fewer than 20 French movies. As shown in the output below:

```
Primary_Genre
Music          1
Western        1
Fantasy        2
Sci-Fi         2
Short          2
Family         3
Romance        3
Mystery        5
Thriller       11
Horror         15
dtype: int64
```

This was also demonstrated in the distribution of primary genres as shown in the output below, which also provides the number in each genre streamed for Netflix, Hulu, Prime_Video and Disney:

Output 1:

	Primary_Genre	Count	Percentage	Netflix	Hulu	Prime_Video	Disney
7	Drama	200	28.4	28.0	11.0	151.0	1.0
4	Comedy	127	18.0	37.0	11.0	64.0	2.0
0	Action	94	13.3	29.0	10.0	50.0	6.0
6	Documentary	94	13.3	18.0	10.0	51.0	1.0
5	Crime	42	6.0	11.0	7.0	23.0	0.0
2	Animation	40	5.7	8.0	0.0	19.0	8.0
3	Biography	37	5.2	12.0	4.0	17.0	0.0
1	Adventure	26	3.7	7.0	1.0	17.0	1.0
10	Horror	15	2.1	3.0	0.0	10.0	0.0
16	Thriller	11	1.6	5.0	0.0	7.0	0.0
12	Mystery	5	0.7	0.0	0.0	5.0	0.0
8	Family	3	0.4	1.0	0.0	2.0	0.0
13	Romance	3	0.4	0.0	1.0	1.0	0.0
15	Short	2	0.3	0.0	0.0	2.0	0.0
9	Fantasy	2	0.3	0.0	0.0	2.0	0.0
14	Sci-Fi	2	0.3	1.0	1.0	0.0	0.0
11	Music	1	0.1	0.0	0.0	1.0	0.0
17	Western	1	0.1	0.0	0.0	1.0	0.0

From this initial investigation, it is recommended that Canopy make movies in the following genres: *Family, Fantasy, Horror, Music, Mystery, Romance, Sci-Fi, Short, Thriller and Western*. However, when the distribution of the best rated movies in each primary genre was investigated (best-rated IMDb ≥ 7) as shown in the following output, only the genres *Documentary, Drama, Comedy and Animation* had more than 20 best-rated French movies.

Output 2:

	Primary_Genre	Count	Percentage	Netflix	Hulu	Prime_Video	Disney
6	Documentary	58	27.5	10.0	5.0	32.0	0.0
7	Drama	52	24.6	12.0	2.0	36.0	0.0
4	Comedy	25	11.8	10.0	2.0	13.0	0.0
2	Animation	23	10.9	5.0	0.0	13.0	5.0
0	Action	16	7.6	5.0	2.0	8.0	4.0
3	Biography	13	6.2	5.0	0.0	5.0	0.0
5	Crime	11	5.2	2.0	3.0	5.0	0.0
1	Adventure	7	3.3	5.0	0.0	4.0	0.0
9	Mystery	2	0.9	0.0	0.0	2.0	0.0
8	Horror	1	0.5	0.0	0.0	1.0	0.0
10	Romance	1	0.5	0.0	0.0	0.0	0.0
11	Short	1	0.5	0.0	0.0	1.0	0.0
12	Thriller	1	0.5	1.0	0.0	0.0	0.0

This increases the options for filmmakers to make a variety of genres, starting in the suggested order of *Westerns, Sci-Fi, Romance, Horror, Adventure, Crime and Action*.

The age distributions for all French movies and best-rated French movies (IMDb rating>7) are provided below:

	Age	Count all french
0	all	27
1	18+	526
2	16+	13
3	13+	73
4	7+	66
	Age	Count best rated
0	all	9
1	18+	135
2	16+	4
3	13+	35
4	7+	28

It is also recommended that the French movies that Canopy makes cater for age groups greater than 16+, as this was the category with the least number of French movies.

The selection of French movies is also offered in other streaming services. Canopy's biggest competitor seems to be Prime_Video as shown in outputs 1 & 2, but mainly for the Drama genre. If Canopy would like to have a competitive advantage over Prime_Video, it would be highly prudent that they make movies in the genres recommended above.

Overall, there was only a small number of French movies in the database with 20 top movies found for the following genres - *Action, Adventure, Animation, Biography, Comedy, Crime, Documentary and Drama*. Their main competitor is Prime_Video particularly for Drama. For their business to succeed it is recommended that filmmakers create movies in the following order of *Westerns, Sci-Fi, Romance, Horror, Adventure, Crime and Action* that cater to audiences over 16 years of age.

Appendix 1

Top 20 movies for each genre filtered by age:

Primary_Genre	Title	Year	Age	IMDb	ID	Netflix	Hulu	Prime_Video	Disney
Action	The Siege of Jadotville	2016	18+	7.2	14754.0	1.0	0.0	0.0	0.0
